

WHAT IS CLAIMED IS:

1. A recording device, comprising:
 - a still image recording portion recording a still image;
 - a video recording portion recording a video;
 - an information recording portion recording information on a
 - 5 correspondence between the still image recorded by said still image recording portion and the video recorded by said video recording portion;
 - a communicating portion communicating with an external apparatus; and
 - 10 a command executing portion interpreting a command received from the external apparatus through said communicating portion and selectively transmitting the still image, the video and the information respectively recorded by said still image recording portion, said video recording portion and said information recording portion.
2. The recording device according to claim 1, wherein said command executing portion transmits the still image and the information respectively recorded by said still image recording portion and said information recording portion through said communicating portion when a
- 5 still image transfer command is received through said communicating portion.
3. The recording device according to claim 2, wherein said command executing portion transmits the still image recorded by said still image recording portion in accordance with a Direct Printing Protocol.
4. The recording device according to claim 1, wherein said command executing portion searches the video recorded by said video recording portion and transmits data of the videos starting from the searched video through said communicating portion when a video search
- 5 reproduction command is received through said communicating portion.

5. The recording device according to claim 4, wherein said command executing portion transmits the video data recorded by said video recording portion by an Audio Visual/Control.

6. The recording device according to claim 1, further comprising a still image producing portion producing a still image by cutting out the still image from the video recorded by said video recording portion.

7. A reproducing device, comprising:

a communicating portion communicating with an external apparatus;

5 a still image display portion displaying a still image received through said communicating portion; and

a video display portion receiving a video corresponding to the still image displayed by said still image display portion through said communicating portion for display.

8. The reproducing device according to claim 7, further comprising a command issuing portion issuing a command through said communicating portion in accordance with an instruction of a user.

5 9. The reproducing device according to claim 8, wherein said still image display portion receives still image data and information on a correspondence between the still image data and video through said communicating portion when said command issuing portion issues a still image display command through said communicating portion.

10. The reproducing device according to claim 9, wherein said still image display portion receives said still image data in accordance with a Direct Printing Protocol.

11. The reproducing device according to claim 9, wherein said command issuing portion transmits information on a correspondence

between said still image data and said video with said video display
command when said command issuing portion issues said video display
5 command through said communicating portion, and

said video display portion receives video data through said
communicating portion for display.

12. The reproducing device according to claim 11, wherein said
command issuing portion receives said video data by an Audio
Visual/Control.

13. The reproducing device according to claim 8, wherein said
command issuing portion issues a command of requesting transmission of
videos corresponding to the still image through said communicating portion
in an order of the still images displayed onto said still image display portion.

14. The reproducing device according to claim 13, further
comprising a switching portion switching positions of the still images
displayed on said still image display portion.

15. A recording and reproducing apparatus with a recording device
and a reproducing device connected through a network, said recording
device including:

a still image recording portion recording a still image;

5 a video recording portion recording a video;

an information recording portion recording information on a
correspondence between the still image and the video respectively recorded
by said still image recording portion and said video recording portion;

10 a first communicating portion communicating with said reproducing
device; and

a command executing portion interpreting a command received from
said reproducing device through said first communicating portion and
selectively transmitting to said reproducing portion the still image, the video,
and the information respectively recorded by said still image recording

15 portion, said video recording portion, and said information recording portion,
and said reproducing device including:

a second communicating portion communicating with said recording
device;

20 a still image display portion displaying said still image received
through said second communicating portion; and

a video display portion receiving a video corresponding to the still
image displayed by said still image display portion from said recording
device through said second communicating portion for display.
